

About the Center for Distributed Learning:

The Center for Distributed Learning (CDL) builds tools and facilitates educational communities that support teaching and learning. The CDL works with faculty and students to understand instructional challenges and brainstorm possible solutions that can be shared among campuses.

CDL Creates Powerful Applications & Tools

The CDL is guided in all of their projects by the way teachers teach and the way students learn. They then apply their knowledge and expertise of web technologies and design to create

powerful applications and tools that support faculty and students in their teaching and learning processes.

Technology Supporting Good Teaching Practices

The CDL provides logistical, process, and development support to projects. Their focus is identifying learning-related problems and applying technology to support good teaching practices. CDL's services are dedicated to projects that have the potential to reach faculty and students throughout the CSU, around the country, and around the world.

Benefits of the Center for Distributed Learning:

- Develops high quality websites and web applications that support teaching and learning
- Provides professional development for Academic Technology professionals
- Provides development support for system-wide academic technology initiatives
- Provides support for networking and sharing best practices among CSU constituencies
- Provides leadership in the application of web technologies to the academic mission of the CSU
