

Postdoctoral Investigator for the University of Maryland Center for Environmental Science

A multi-institutional, NSF-Funded, 3 year project involving field and modeling studies seeks a postdoctoral investigator to work at the University of Maryland Center for Environmental Science, Horn Point Laboratory (<http://hpl.umces.edu/>). The project involves three dimensional coupled biogeochemical modeling of the role of the Amazon River plume in regional oceanography, climate, carbon biogeochemistry and ecosystem dynamics. This is an excellent opportunity for an individual interested in interdisciplinary and inter-institutional collaboration. The University of Maryland is an affirmative action/equal opportunity employer. Applications should include: CV, statement of research interests, and references emailed to Victoria Coles (vcoles@umces.edu). Review of applications will begin December 15, 2009.
