Undergraduate research opportunities at CSUMB

The University of California, Santa Cruz (UCSC), has a long-standing tradition of providing undergraduate research opportunities for students. The program is designed to allow students to gain valuable research experience, develop critical thinking skills, and explore potential career paths in various fields. The UCSC Research Experience for Undergraduates (REU) program is one of the many opportunities available to students.

In this program, students work with faculty mentors and other researchers on projects that are aligned with their interests. The projects can range from basic research to applied research, depending on the student's goals and the project's needs.

The UCSC REU program offers a unique opportunity for students to engage in cutting-edge research, collaborate with experts in their field, and develop important skills that will be beneficial throughout their academic and professional careers. Students who participate in the UCSC REU program often go on to pursue advanced degrees or careers in their field of study.

The UCSC REU program is open to undergraduate students from all majors and academic backgrounds. Students interested in participating in the UCSC REU program should visit the program's website for more information about eligibility requirements and application procedures.

The UCSC REU program is funded by a grant from the National Science Foundation. The program is administered by the UCSC Research Division, and the program's director is Dr. Margaret O'Donnell.

For more information, visit the UCSC REU program's website or contact Dr. O'Donnell directly.
