**Measureable Goals**

1. Increase the enrollment percentage of Hispanic and low-income transfers from partner institutions by an average of 20%.

2. Increase degree completion by target students for partner institutions by an average of 20%.

**Results and Discussion**

Since the start of WOW 2 STEM, CSU Stanislaus has experienced an average increase of 35% in STEM enrollment by students transferring from Merced College and San Joaquin Delta College.

The breakdown of STEM transfer enrollment by cohort year is depicted in the table to the left. Generally, an increase in the number of Hispanic and low-income transfers has occurred from cohort to cohort. CSU Stanislaus closed Spring 2013 admissions, which likely explains the marginal gain for 2012-2013 and more significant increase for 2013-2014. Students who had planned to transfer Spring 2013 had to wait until Fall 2013 to be admitted.

**WOW 2 STEM Participants vs. Those Who Did Not Participate**

CSU Stanislaus welcomed the first set of WOW 2 STEM transfers in Fall 2012. While it is still early to assess graduation outcomes, on average WOW 2 STEM participants have higher GPAs than non-WOW 2 STEM transfers from partner institutions. Participating transfers have an average 2.94 cumulative GPA compared to 2.79 for non-participating transfer students who are Hispanic or low-income.
