If purchases were made and the % "SABRC Compliant" rate (column 4) is deficient, meaning that it is less than 50% for paint, antifreeze, and tires or is less than 75% for any of the remaining categories, please provide an explanation. An explanation for all deficient categories is important during the review of your annual report. In addition, please include any other relevant information or issues.

The CSU met the 75% goal for the new categories implemented Jan 2023; Erosion Control Products, Pavement Surfacing, and Soil Amendments and Toppings. In addition we exceeded the 75% goal for Metal Products and 50% for Tires. The CSU missed the 75% goal for the following categories Building Finishes, Carpet, Glass, Lubricating Oils, Plastics, Textiles and Tire-derived Products; and 50% goal for Antifreeze and Paint. The CSU is partnering with suppliers and our campuses to collaborate on ways to increase our PC purchasing by establishing a sustainability program within these product categories. We also want to leverage the system wide contracts we have in place to continue to include more PC recycled products. The CSU missed the 75% goal for Printing & Writing Paper and Paper Products however, at 64% we have implemented a new Auto Sub program, with Staples. This program replaced previously ordered products with recycled only options for purchase. We hope to see an increase with out SABRC compliant spend in these two categories with this program. If successful we will include additional suppliers to that program. In addition, during the last quarter of 2022, there was a recycle paper shortage that contributed to the decrease of our SABRC compliance. The Domtar fire (the largest papermill and key manufacturer for

recycle paper) was a key factor in the decline of our recycled Printing & Writing Paper and Paper Product spend.
