The "a-g" requirements for admission to the California State University have remained unchanged for more than 20 years, and those impacted by the proposed addition of one quantitative reasoning course is significant. The CSU remains committed to an inclusive and ongoing dialogue to ensure student success.

Since the Academic Senate of the CSU first convened a Quantitative Reasoning Task Force to review the CSU’s expectations for student proficiency in quantitative reasoning in 2016, the CSU has proactively engaged with internal and external educational partners, government officials and other organizations through informational presentations and wide-ranging discussions. The following is a visual timeline of some key discussions, though it does not represent the full list of meetings and consultations.

#### November 2020
- CSU Board of Trustees presentation on Quantitative Reasoning Proposal

#### December 2020
- Meeting of the CSU Steering Committee on Academic Preparation and Quantitative Reasoning
To ensure that all California students have the access and opportunity to earn a high-quality degree that prepares them for their future, the California State University has proposed expanding its “a-g” admission requirements to include one additional course in quantitative reasoning in high school. This level of academic preparation is essential for success in college, the workforce and in life. It is also key to closing racial and gender disparities, especially in the high-demand, high-paying STEM fields. The CSU Board of Trustees, working in collaboration with a steering committee of internal and external stakeholders, is considering next steps. The proposed requirement would be applicable for fall 2027.
